by Charles Grier Johnson, Jr. Author: ... Ground cover fires — Oregon — Physiological effect; Forest fires — Oregon; Vegetation management — Oregon; ... to fire. What grows back after a fire often depends on what was there before, and the coping mechanisms of trees and understory vegetation depend on the historical fire regimes. In ponderosa pine and dry Douglas-fir forests, the fire regime was historically characterized by frequent, low-intensity and sometimes mixed-severity fires. Initiated in 1997, the study is located in the Malheur National Forest in the Blue Mountains Ecoregion of northeastern Oregon, USA (Figure1). The study consists of 7 upland stands (Driveway stands 14, 26, and 28 to the east; Kidd Flat and Trout stands to the west) ranging in size from 35–56 ha and 1600–1700 m in elevation. The Manning Creek prescribed burn on the Fishlake National Forest, Utah, was part of 2019 Fire and Smoke Model Evaluation Experiment (FASMEE). USDA Forest Service photo by Jill Ivie. Fuel treatments are management actions that alter the amount or arrangement of forest vegetation to mitigate wildfire behavior and enhance fire resiliency.
